

CHAPTER # 3

Q1 Utility Program :-

A utility program is a type of system software that assists user with

controlling or ~~manufacturing~~ maintaining the operation of computer, its devices, or its software. A

utility program typically offer features that provide environment conducive to successful use of application software. Example of utility program, utility program protects a computer against malicious software

and unauthorized instructions, manage files and drive, compress files, Play media files and burn optical disc.

Malware:-

One of the more important utility programs protects a computer against malicious software, or

"malware", which is a program that acts without a user's knowledge and deliberately alter the operations of computer.

A computer virus is a type of malicious software.

Q2 Presentation Software:-

Presentation software is an application software that allow user to create visual aids for presentations to communicate ideas, messages, and other information to a group.

Presentation software typically provides a variety of pre-defined presentation formats that defines complementary colours for backgrounds, text, and graphical accents on the slides. This software also provides a variety of layouts for each individuals slides such as a title

slide, two-columns slides,
a slide with clip art,
a graph, a table, a
chart or a diagram.

In addition, you can enhance
your text and graphical
images on slide with 3-D
animations and some other
special effects such as
shading, shadow and
texture.

Q.3 Travel & Mapping Software:-
Travel and mapping software
enables user to view maps,
determine route directions,
and locate point of
interest. Using travel and
mapping software, which
is available as package

software and a web applications, you can display maps by searching for an address, a postal code, telephone number, or point of interest (such as airports, lodging and historical sites).

Reference Software :-

Reference software provides valuable and thorough information for all individuals. Popular reference software includes encyclopedias, dictionaries and health/medical guides.

Q4 CBT :-

Computer based training (CBT) is a type of education in which

students learn by using and completing exercises with instructional software.

CBT typically consists of self-directed, self-paced instruction about a topic.

Beginning athletes, for example, use CBT program to intricacies of baseball, football, soccer, tennis and golf. The military and airlines use CBT simulations to train pilots to fly in various conditions and environments.

Q5

WBT :-

Web Based ~~Techno~~ Training is a type of CBT that use Internet

technology and consist of application software on a Web. Similar to CBT, WBT typically consists of self-directed, self-paced instructions about a topic. WBT is popular in business, industry and schools for teaching new skills and enhancing existing skills of employees, teachers, or students.

E-learning :-

Electronic learning, is the delivery of education via ^{some} electronic ~~component~~ system such as Internet, networks, or optical disc.

To enhance communications,
e-learning system also
may include video conferencing,
email, blogs, wikis, newsgroups,
chatrooms, and groupware.
